#### **Chapter 3**

### Solution 3.1

# *What is the difference between an Income Statement for a service provider compared to a product provider?*

The income statement is normally prepared for a period of time showing the summary of revenues and expenses over that period. The presentation of the income statement will differ for businesses that offer a service (consultants, banks, tour operators) to those that sell a product (retailers and publicans).

#### Income statement for period ended 30 June

SERVICE PROVIDER

Income statement for period ended 30 June PRODUCT PROVIDER

	€	€		€	€
Sales		100,000	Sales		130,000
Less expenses			Less the cost of sales		<u>40,000</u>
Rent	18,000		Gross Profit		90,000
Rates	5,000		Less expenses		
Wages and	40,000		Rent & rates	12,000	
Salaries					
Repairs	3,500		Wages and Salaries	25,000	
Advertising	5,000		Repairs	2,100	
Accountants'	2,000		Advertising	3,000	
fees					
Solicitors' fees	1,000		Professional fees	4,000	
Insurance	7,000		Office expenses	14,900	
Phone	<u>1,500</u>	83,000	Insurance	<u>4,500</u>	<u>65,500</u>
Net Profit		<u>17,000</u>	Net Profit		<u>24,500</u>

The difference between the two statements is that the provider of services does not purchase stock of goods for resale. The product provider purchases stock at one price (cost price) and sells it at another price (selling price). The difference between the two will amount to his gross profit and is shown in a trading account.

# Distinguish between revenues and expenses using examples to illustrate your answer?

*Revenue* is the income generated by the business from the sale of its product or service. It is important to note that revenues include both cash and credit sales. Thus a sale is recorded even if the monies are not yet received. This is based on the realisation concept (see below) which states that a transaction is recorded when the purchaser incurs liability for the goods even though no cash may have changed hands. Revenues do not include any monies received by means of loans or cash received from selling fixed assets. These are transactions that affect the statement of financial position. Revenues are income earned (not necessarily received) from the sales of the products or services provided by the business.

*Expenses* are the costs incurred in running then business on a day to day basis and do not include the purchase of fixed assets or the repayment of any loans. Expenses are the cost of using the resources available to a business (people and fixed assets) to produce a product or service and sell it. Examples include purchases of inventory, wages for personnel, fuel to power assets (motor vehicles equipment), repairs to fixed assets, light and heat, insurance, advertising, rent , rates, telephone and internet costs, accounting fees and general expenses.

Account to be debited	Account to be credited

1.	Paid electricity by cheque	Electricity a/c	Bank a/c
2.	Paid for stationary by cash	Stationary a/c	Cash a/c
3.	Paid insurance by cheque	Insurance a/c	Bank a/c

#### Identify the four accounts that record inventory transactions and explain why the asset of inventory is accounted for through these accounts

For businesses buying and selling products the selling price is normally set at a price above the cost price – otherwise the business would not make a profit. Inventory is bought at one price, the purchase price, and sold at another price (normally higher), the selling price. It makes no sense to have one account for inventory as goods are purchased and sold at different prices. Thus the actual inventory account is divided into four separate accounts as follows.

- Sales account Detailing all inventory sold at selling price
- Sales returns account detailing all inventory returned at selling price Inventory
- Purchases account detailing all inventory purchased at cost price.
- Purchases returns account detailing all inventory returned at cost price

These four accounts record all inventory going into the business (either through purchases or sales returns) and going out of the business (either through sales or purchases returns).

## Solution 3.5

#### How a debit can represent both an asset and an expense

Assets are like expenses as, to acquire them, involves the outlay of some resource, usually money. Assets, expenses and losses are a cost to the organisation.

Also expenses have the effect of reducing profit and this has the effect of reducing capital. To reduce capital one must debit the account. Thus expenses and assets are represented by debits in double entry accounting.

## Solution 3.6

(a)

		Account to be debited	Account to be credited
1.	Stock purchased on credit	Purchases a/c	Irish W/S Ltd a/c
2.	Stock purchased by cheque	Purchases a/c	Bank a/c

# *Explain in your own words the relationship between `net profit' and `capital'.*

If a business makes a profit then this profit belongs to the owner and, should the owner decide to keep the profit in the business, then profit increases capital (the amount the owner puts into the business). On the other hand, losses decrease capital. In general most business will retain a lot of profits in the business, as this is an important form of finance to enable the business to expand.

#### What do you understand by the term 'drawings'.

The term 'drawings' represents money or any other asset taken out of a business by the owner for his own use. For example, if the owner of the business withdrew cash or stock for his own use. Drawings is the opposite to capital and, in the balance sheet, drawings is deducted from capital to show the net capital invested by the owner.

#### Solution 3.10

#### By comparing the differences in the statements of financial position from one date to the next you are required to state as fully as possible what transaction took place.

- 1. Purchased equipment for €10,000 paying by cheque.
- 2. Purchased inventory for €10,000 paying by cheque.
- 3. Four transaction have occurred between 12 and 15 January
  - Owner invested a further €50,000 in the business.
  - The business acquired additional loans of €50,000
  - The business acquired additional premises for €100,000
  - The business paid amount owing to accounts payable amounting to €3,000- the amount paid by cash.
- 4. The business sold inventory originally costing €10,000 for €20,000 with the monies received immediately
- 5. The business sold inventory on originally costing €5,000 for €10,000. The sale was on credit
